

The **parskip** package

H. Partl Robin Fairbairns*

2001/04/09

This is **parskip.sty** by H. Partl, TU Wien, as of 19 Jan 1989.
Addition (originally from Donald Arseneau) added 2001-12-13 by
Robin Fairbairns.

Package to be used with any document class at any size. It produces
the following Paragraph Layout:

Zero Parindent and non-zero Parskip. The stretchable
glue in \parskip helps L^AT_EX in finding the best place for
page breaks.

In addition, the package adjusts the skips between list items.

With package option **parfill**, the package also adjusts \parfillskip
to impose a minimum space at the end of the last line of a para-
graph.

This package is no more than quick fix; the ‘proper’ way to achieve
effects as far-reaching as this is to create a new class. An example
class is to be found in the **ntgclass** set: **artikel3.cls**

*rf10@cam.ac.uk

The **koma-script** bundle classes and the **memoir** class all provide similar functionality, and their respective documentation files discuss the pros (such as they are) and cons of this approach.
