0.1 `summary.zelig`: Summary of Simulated Quantities of Interest

Description

Summarizes the object of class `zelig` (output from `sim`) which contains simulated quantities of interst.

Usage

```
## S3 method for class 'zelig':
summary(object, subset = NULL, CI = 95, stats = c("mean", "sd"), ...)
```

Arguments

`object`	output object from `sim` (of class `"zelig"`).
`subset`	takes one of three values:

NULL	(default) for more than one observation, summarizes all the observations at once for each quantity of interest.
a numeric vector	indicates which observations to summarize, and summarizes each one independently.
all	summarizes all the observations independently.

`stats`	summary statistics to be calculated.
`CI`	a confidence interval to be calculated.
`...`	further arguments passed to or from other methods.

Value

`sim`	number of simulations, i.e., posterior draws.
`x`	values of explanatory variables used for simulation.
`x1`	values of explanatory variables used for simulation of first differences etc.
`qi.stats`	summary of quantities of interst. Use `names` to view the model-specific items available in `qi.stats`.
